

# APKT1604PDER

## Product Images

## Summary

APKT1604PDER

## Content

### Features and benefits

The nano blue coating process, which adopts a new nano blue coating, is suitable for processing HRC40-HRC55 degree materials, mainly for hard to process materials such as high hardness steel and quenched steel, and can also process stainless steel. The imported base material, German advanced plasma physical coating technology, has strong universality, high wear resistance, and long service life and long service life
